

I claim:

- Page 21

11. The method of claim 1 wherein the server system for generating the printing uses a data storage medium storing information for a plurality of users; and

a receiving component for receiving requests to collect, display, and print items, a request including an indication of one of the plurality of users.

13

12. The method of claim 1 wherein the client system can request the server system to print selected items or all items at different times.

142

13. The method of claim 1 wherein the items to be printed are related and have associated dependencies.

15.

14. The method of claim 1 wherein content, attributes, and quantities of subsequently printed items are dependent on either user changes or decisions or variables associated with previously printed items.

16

15. The method of claim 1 wherein content, attributes, and quantities of subsequently printed items are dependent on variables of previously printed items.

17

16. The method of claim 1 wherein the server system can retrieve unique data from the client system when the client system is not connected to the server system for the purpose of sending the collected information to the server system at a time determined by the requester for the purpose of reducing costs associated with maintaining a connection to the server system.

18

17. The method of claim 16 wherein the server system can send to the client system a stand-alone executable software element that permits the client system to collect and change the unique data without connection to the server system.

19

18. The client system of claim ¹⁸17 wherein the data entry and display component is a stand-alone executable software element.

28

19. The method of claim ¹⁷16 wherein the client system can connect or reconnect to the server system for the purpose of sending to the server system unique data that was collected or changed while the client system was not connected to the server system.

21

20. The method of claim ¹⁷~~16~~ wherein the content of the unique items can only be modified by or changed by content residing solely on the server system prior to printing.

22

22
21. The method of claim ²¹20 wherein the client system and server system communicate via the Internet.
